Hey! Where are you? I just walked around 13.

Unfortunately, I have a TMDL litigation meeting from 3-4, so won't be able to connect with you beforehand, unless you're free now!

Jenny - I have to say that I'm skeptical but open if ODA isn't just giving this lip service. **Non-Responsive**  
**Non-Responsive** and heard him on a Mid-Coast field TMDL trip last year say to the entourage that farmers were already doing what they needed to be doing under 1010 plans and nothing else would be required because of the mid coastTMDL.

I also forwarded ODA (including Ray) and DEQ water samples (that showed E. coli counts jump from 7.4/100 mls directly above his CAFO to 4,080/100 mls directly below his CAFO) in March 1999. This was in Scappoose Bay Watershed **Non-Responsive** Just last year (only 13 yrs. later!) the OR Attorney General took a major enforcement action against William Holdner, the CAFO operator...but only with major EPA OIC involvement. **Non-Responsive**  
**Non-Responsive** landowners, WQ sample results, and dates where **Non-Responsive**

Aside from **Non-Responsive** and lack of specificity in 1010 plans and associated OARs, one of the biggest issues has been an ODA and NRCS refusal to include salmon in the equation. Both agencies have claimed in the past that they only address WQ not salmon habitat. ODA has also focused on ground cover (grass and forbs) vs. riparian vegetation. The article from Dru makes it sound like ODA may be moving a bit towards requiring riparian vegetation. We'll see.
